RESEARCH INTERESTS

I have been actively researching two core areas in AI: Information Retrieval (IR) and Natural Language Processing (NLP). My work focuses on leveraging machine learning, large language models (LLMs) to drive advancements in three key directions:

- **Conversational agents:** proactive conversational search, knowledge-grounded dialogue systems
- **Model- and data-efficient neural ranking:** LLM-based re-ranking, generative retrieval, synthetic data generation
- **Automatic evaluation:** LLM-based relevance judgment prediction, query performance prediction
