RESEARCH INTERESTS

I have been actively researching two core areas in AI: Information Retrieval (IR) and Natural Language Processing (NLP). My work focuses on leveraging machine learning, large language models (LLMs) to drive advancements in three key directions:

- Conversational agents: proactive conversational search, knowledge-grounded dialogue systems
- Neural ranking and ranking strategy planning: LLM-based re-ranking, generative retrieval
- Ranking result reflection (automatic evaluation): LLM-based relevance judgment prediction, query performance prediction
